

# THE ALUMINUM BEVERAGE CAN'S INFINITE CIRCLE OF LIFE

Unlike plastic, paper and cardboard, aluminum can be recycled endlessly

Aluminum beverage cans play an essential role in recycling.

Aluminum cans are the most valuable material in the recycling stream. The revenue generated by recycling aluminum cans provides the economic foundation for recycling operations.

The United States has the infrastructure for efficient, large-scale aluminum can recycling. 5 million aluminum cans are recycled in the United States every hour, and 45 billion were recycled in the United States in 2019.

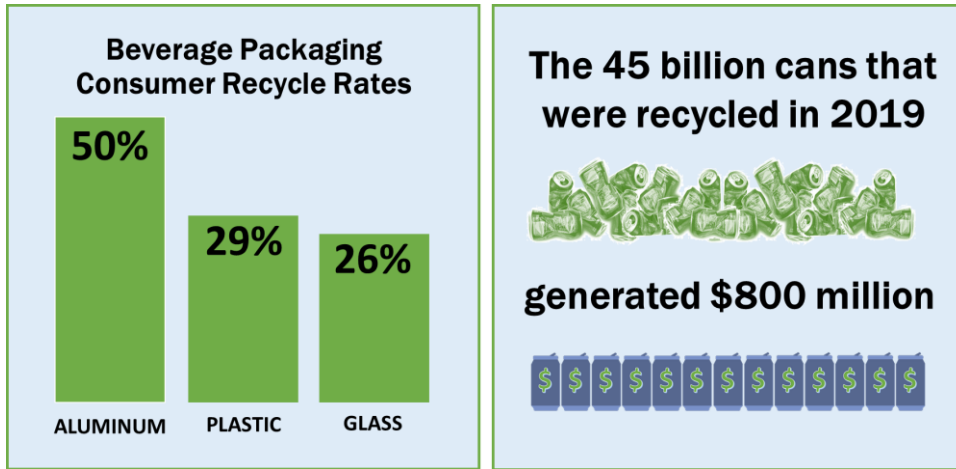

The aluminum can is mostly recycled aluminum. The aluminum can industry is committed to recycling and would like to have all aluminum cans recycled.

Recycling aluminum is good for the environment and supports the circular economy. Making a can from recycled aluminum reduces energy use and greenhouse gas emissions more than 90 percent compared to using new aluminum.

## Aluminum cans have the highest rate of recycling of any material

## If we recycled more aluminum cans there would be:
