

Food that is canned is food that isn't wasted

Food Cans

◎ Extend shelf life

Canned food retains quality and taste for more than two years, making products easy to store and limiting the likelihood of consumers discarding food because of short “best before” dates.

◎ Lock in freshness

Steel food cans seal in the good and lock out the bad (i.e., germs, air, light and other elements that degrade product quality and that can cause foodborne illness).

◎ Protect food

Steel food cans provide a durable metal exterior combined with an airtight seal, which protects products throughout the supply chain without the need for refrigeration.

◎ Address food loss

Canning offers a solution to surplus food in the supply chain, preserving food for future consumption that otherwise would be wasted.
